DATA SHEET

LONE WORKER PROTECTION

Micro ADBS Lone Worker Alarm System

The SBES Micro ADBS Lone Worker System will provide an alarm that can contact other people automatically in the event of an emergency. Help can be summoned in two ways:-

1). By pressing the two buttons simultaneously on either side of the alarm unit an immediate Panic alarm will be sent

2). Should the unit be tilted more than 45 degrees, after 30 seconds an audible or vibration alert will begin notifying the user that the alarm unit has entered the warning stage, if the alarm unit is not returned to the upright position within 30 seconds an automatic Person Down alarm will be sent.

When the control unit receives an alarm signal, the system activates the beacon sounder to alert people in the local area that assistance is required. Simultaneously the system activates the internal Telecom Module notifying up to 10 telephone numbers of an emergency.

Technical Data:

L/W Frequency: 868.6625 MHz
Supply voltage: 240v AC

Options:

Additional Lone Worker Units
Intrinsically Safe Lone Worker Units
Vibrate Warning Lone Worker Units
